

停不下了的卡爾

雲書苑-小甄 作

人^レ和^レ自^レ然^レ界^レ每^レ天^レ都^レ在^レ製^レ造^レ氣^レ體^レ， 有^レ些^レ是^レ有^レ益^レ的^レ， 有^レ些^レ是^レ有^レ害^レ的^レ。

Humans and the natural world are constantly generating gases every day, some of which are beneficial, while others are harmful.

地球變得越來越熱的氣體，是有害的氣體，我們把它稱作溫室氣體。

The Earth's warming gases, known as greenhouse gases, are harmful gases.

黑色的氣體越來越大，我們把它取名叫卡爾。卡爾正接收空氣中的廢氣。

The black gas grew larger and larger, and we named it Carl.

當卡爾飄到了山上，動物們也吸到這些卡爾的氣體，逐漸受到污染。

When Carl drifted to the surface of the sea.

當飄向了大海，水氣很快地鑽進卡爾的身體裡，身體變得好大好大。

When drifting into the sea, moisture quickly seeped into Carl's body, causing it to swell up significantly.

卡爾繼續往天空上飄去，身體越來越大，
又遇到正在航行的飛機。

Carl continued to float into the sky, his body getting
bigger and bigger, and then he encountered an
airplane in flight.

卡爾每到一个地方，气温都会升高，积雪也会融化。

Every time Carl arrives at a place, the temperature rises and the snow melts.

卡爾累了，到了空曠的地方休息，旁邊有很多企鵝和北極熊。

Carl got tired and rested in an open area, surrounded by many penguins and polar bears.

但雪卻開始融化了，卡爾真的不是故意的。

But the snow began to melt, Karl really didn't mean to.

卡爾真的不是故意的，但它真的也不知道還要帶這些氣體去哪裡了。

Karl really didn't mean it, but he also doesn't know where to take these gases.

要愛惜地球，才能減緩溫室效應。
